

Vaccinations – What You Need To Know

- Vaccines help prevent life-threatening diseases
 - “Vaccine-preventable diseases kill about 50,000 adults in the U.S. each year”¹
- Vaccine-preventable diseases are expensive
 - Each vaccine-preventable disease can cost anywhere from \$100 to over \$100,000 to treat²
- Vaccines are safe and effective
- Getting vaccinated help protect you, your family, and your friends from getting sick
- Vaccines can help protect you when you travel
- You can get vaccinated without a prescription from a certified pharmacist
- Most insurances (including Medicare) cover the cost of vaccines
